

Polyetheretherketone (PEEK) Film Data Sheet

Polyetheretherketone (PEEK) is a high-performance amorphous or semi-crystalline thermoplastic film with unique properties. PEEK films have high temperature resistance, excellent chemical and fatigue resistance and very high thermal stability. PEEK films exhibit superior mechanical and electrical properties at elevated temperatures in critical environments.

Thanks to its excellent chemical resistance, PEEK film is effectively used as a metal replacement in harsh environments. PEEK is inert to all common solvents and resists a wide range of organic and inorganic liquids.

PEEK can be used in hot water or steam without permanent loss in physical properties. Ajedium PEEK film carries a VTM-0 class flammability rating (27 μ) and exhibits very low smoke and toxic gas emission when exposed to flame. For all these reasons PEEK is used in high temperature electronic circuitry manufacturing.

Moreover, due to its high strength-to-weight ratio, PEEK film has come under consideration as an aerospace structural material.

MANUFACTURING

PEEK films are extruded by Ajedium Films in a wide range of thicknesses, widths and lengths.
